

NEWS RELEASE

April 21, 2004

TSX-V: AAG

Sedar Profile # 00003879

FIRST QUARTER GOLD SALES

The Board of Directors of Andean American Mining Corp. (TSX-V: AAG) is pleased to provide this production update for their 100% owned Santa Rosa Mine located at 4000 meters above sea level, Department of Apurimac, Province of Grau, Peru.

This past quarter was the rainy season and it was originally planned to operate all leach pads under tarpaulins with a drip feed leachate distribution system. The previously reported calcification problems in the drip feed system caused a return to a sprinkled system. Not ideal but simply necessary.

Gold production numbers as follows:

	Actual		
	January	February	March
Production of Gold			
Total Gold to Pads	1,561 oz	1,602 oz	2,512 oz
Recoverable Gold			
Produced to Leach Pads	1,093 oz	1,122 oz	1,762 oz
Measured Daily	35	38	56
Ounces Recovered (sold)	832 oz	751 oz	1,044 oz
% of Total Ounces	53.3%	46.9%	41.5%
% of Total Recoverable	76.1%	66.9%	59.2%

Gold is conservatively estimated at 85.2% soluble and then reduced to an overall 70% recoverability based on an initial recovery and a secondary recycling. The company will initiate the recycling upon the availability of the silver precipitate circuit (SPC). At that time both recycling gold and silver will be recovered. Gold is expected to be recovered at greater than .5 g/mt and silver at something greater than 22 g/mt. The cost of the operation is estimated at less than \$1.00 U.S. This will dramatically increase the economic benefit to normal gold and silver production.

Andean American's objective is to create shareholder value through low cost mine development and exploration. At Santa Rosa, through higher process rates and continued process refinements the aim is to have production costs in the lowest quartile for the industry. Andean American; producing, profitable, expanding and exploring.
